The novel opens with Aunt Polly scouring the house in search of her nephew, Tom Sawyer. She finds him in the closet, discovers that his hands are covered with jam, and prepares to give him a whipping. Tom cries out theatrically, “Look behind you!” and when Aunt Polly turns, Tom escapes over the fence. After Tom is gone, Aunt Polly reflects sadly on Tom’s mischief and how she lets him get away with too much.

Tom comes home at supper-time. Tom’s family is now very much interested in Tom’s adventures. During supper, Aunt Polly asks Tom whether he has been skipping school that afternoon and what events have occurred. Tom claims he has been studying hard and shows her that his coffee is still warm from breakfast. Aunt Polly is satisfied.

Tom and the new arrival enter a rapturous welcome. Tom’s mother is overjoyed and affectionate. Tom goes out of the house into the street. Aunt Polly scolds him for being out so late.

When he returns home in the evening, Tom finds Aunt Polly waiting for him. She notices his dirtied clothes and resolves to make him work the next day, a Saturday, as punishment.

On Saturday morning, Aunt Polly sends Tom out to whitewash the fence. Jim passes by, and Tom begs to get him to do some of the whitewashing in return for a “white alley,” a kind of muzzle. Jim almost agrees, but Aunt Polly appears and chases him off, leaving Tom alone with his toil.
The novel opens with Aunt Polly scouring the house in search of her nephew, Tom Sawyer. She finds him in the closet, discovers that his hands are covered with jam, and prepares to give him a whipping. Tom cries out theatrically, “Look behind you!” and when Aunt Polly turns, Tom escapes over the fence. After Tom is gone, Aunt Polly reflects sadly on Tom’s misdeeds and how she lets him get away with too much.

Tom comes home at supper time, barefoot and dirty. He tells his aunt about his adventures. Despite supper, Aunt Polly has been to school that morning and must be skipped school that afternoon and never returns. Tom’s aunt is still away from her house, but Sid, Tom’s half-brother, is not. Tom has sworn the boy himself to disguise himself and eventually sneaks into the house.

When he returns home in the evening, Tom finds Aunt Polly waiting for him. She notices his dirtied clothes and resolves to make him work the next day, a Saturday, as punishment.

On Saturday morning, Aunt Polly sends Tom out to whitewash the fence. Jim passes by, and Tom tries to get him to do some of the whitewashing in return for a “white alley,” a kind of mocking. Jim almost agrees, but Aunt Polly appears and chases Tom off, leaving Tom alone with his task.
Following the previous post where we ranked CTA performance using the Geometric Information Ratio, a couple of readers have requested clarification/more information on it. So I thought a reference post dedicated to the Geometric Information Ratio might be a good idea. This post contains a spreadsheet used to calculate the Geometric Information Ratio, and expanded information on how the...

Intro Page - Gary Osborn

Present Value (PV) Money now is more valuable than money later on. Why? Because you can use money to make more money! You could run a business, or buy something now and sell it later for more, or simply put the money in the bank to earn interest.

Present Value (PV) - Math Is Fun

The geometric mean differs from the arithmetic average, or arithmetic mean, in how it's calculated because it takes into account the compounding that occurs from period to period. Because of this...

Arithmetic Mean vs. Geometric Mean - Investopedia

Your child starts their exploration of 3d geometric shapes the moment they try to push that square peg through a round hole! Though identification of common figures such as the sphere, cylinder and cuboid starts in kindergarten - new knowledge is explored in most grades.

3D Geometric Shapes made easy with the use of stunning...

The industry expert at the IT research firm Gartner said most of these services... Definition:

Popularly called Geometric Mean Return, it is primarily used for investments that are compounded. It is used to calculate average rate per period on investments that are compounded over multiple periods...

Definition of Geometric Average Return | What is Geometric...

What we've got here is two geometric series; one going from 1 to N, and the other going from N + 1 to infinity. The result is basically too ugly to bother writing out; it's more sensible just to use the formula for the geometric series in a spreadsheet or computer program.

Stock Valuation Formula (DCF) (with Graph and Calculator Link)

The geometric distribution is the only discrete memoryless random distribution. It is a discrete analog of the exponential distribution. Note that some authors (e.g., Beyer 1987, p. 531; Zwillinger 2003, pp. 630-631) prefer to define the distribution instead for 1, 2, ..., while the form of the distribution given above is implemented in the Wolfram Language as GeometricDistribution[p].

Geometric Distribution -- from Wolfram MathWorld

Compound Interest Formula. FV = P (1 + r / n) Yn where P is the starting principal, r is the annual interest rate, Y is the number of years invested, and n is the number of compounding periods per year.
